Description

A person skilled in the art could have easily conceived of using "titanium dioxide fine particles containing cobalt" which are publicly known for effecting a suitable action by being blended with an antireflection film as described in document 2, as the titanium dioxide fine particles to be also blended with an antireflection film whose refractive index is high as described in document 1.

Therefore, the subject matters of claims 1-22 of the present application do not appear to involve an inventive step, since they are obvious to a person skilled in the art from the inventions described in documents 1 and 2.

The subject matters of claims 1-22 of the present application appear to be industrially applicable.
